EDUCATION

California State University, San Bernardino (CSUSB) *Bachelor of Science, Bioinformatics*

PROJECTS

Momentum Clone Project

- Developed application to increase productivity by implementing a pomodoro clock and providing a real time display of the current time in the users area. This application was developed completely by myself using the following technologies.

Technologies used: Javascript, CSS, HTML, JQuery, Particle.js, Twitter API

Budget Calculator

- Developed application in order to assist college students in budgeting their finances. Users input their total income and expenses for the month and visually see where their money is going.
- Technologies used: Javascript, CSS, HTML, D3.js*

Memory Card Game

- Developed application in order to help improve memory through the use of a matching game. The player has a 4 x 4 grid of cards in which they must flip and match in order to complete the game. A score and timer is displayed in order to show how well they performed each round.

Technologies used: Javascript, CSS, HTML

CSUSB PIKE (csusbPike.com)

- Developed site is to bring information about the Pi Kappa Alpha fraternity to the community and assist in gaining more members. Responsibilities included creating wireframe for website, building site, and coordinating team. Collaborated with photographer and editor to implement media and content for website.

Technologies used: Javascript, CSS, HTML
